

YASH SHERIKAR

Java Full Stack Developer | Spring Boot, Microservices, AWS, Kafka | Fintech & Payment Systems

Pune, Maharashtra, India | +91-8698011606 | yashsherikar1821@gmail.com | [Portfolio](#) | [Github](#)

PROFILE SUMMARY

Full-Stack Java Developer with 2+ years of experience (including freelance) designing and building scalable, cloud-native microservices using Java, Spring Boot, React.js, and AWS. Domain expertise spans Fintech, Digital Banking, and E-Commerce, with hands-on ownership of secure payment systems integrating Stripe and PayPal under JWT/OAuth2 and PCI-DSS-aligned authentication flows. Proven track record of improving system performance and reducing latency in Agile environments, with strong DSA fundamentals (500+ problems solved) and growing GenAI/Al-assisted development expertise through independent full-stack product delivery.

CORE COMPETENCIES

Languages: Java (8/11/17), SQL, JavaScript, C, C++

Frameworks & Libraries: Spring Boot, Spring Framework, Spring Security, Spring Data JPA, Hibernate, REST APIs, Microservices, React.js

Databases: MySQL, MongoDB, PostgreSQL, Redis, Apache Kafka

Cloud & DevOps: AWS (EC2, S3, Lambda), Docker, Kubernetes, CI/CD, Jenkins

Security: JWT, OAuth2, AES Encryption, PCI-DSS Compliance, Role-Based Access Control | **Domain:** Fintech, Payment Gateway Integration (Stripe, PayPal), Digital Banking, E-Commerce

Developer Tools: Git, Maven, Postman, JUnit, Mockito, Swagger/OpenAPI

Methodologies: Agile, Scrum, Distributed Systems, System Design, Event-Driven Architecture

GenAI Tools: Cursor, GitHub Copilot, Claude, ChatGPT, Groq API (LLM Integration)

PROFESSIONAL EXPERIENCE

Full-Stack Java Developer

Globe Minds Technology Solutions, Pune | May 2025 – Present

- Architected and developed Spring Boot microservices handling 25,000+ daily requests, improving overall system throughput and reliability.
- Designed and implemented secure payment microservices integrating Stripe and PayPal with AES encryption and JWT-based authentication for production transactions.
- Improved database performance by 30% by redesigning MySQL indexes and optimizing query execution plans.
- Implemented Redis caching layers across high-traffic endpoints, reducing average response latency significantly.
- Built robust exception handling and monitoring mechanisms, cutting bug-resolution time and improving production stability.
- Achieved 90% unit test coverage using JUnit and Mockito with integration test suites covering core payment flows.
- Collaborated in Agile/Scrum cross-functional teams, participating in system design reviews and sprint planning for scalable feature delivery.
- Led internal code review standards and design discussions, improving overall code quality metrics across the team.

Freelance Full-Stack Java Developer

LogiBit Technologies (Remote) | Aug 2024 – Mar 2025

- Developed a comprehensive Doctor-Patient Management System using Java, Spring Boot, and React, connecting doctors and patients through a unified healthcare platform.
- Designed secure patient registration and profile management modules, ensuring data privacy and structured medical record storage.
- Built a doctor dashboard enabling patient management and prescription handling, streamlining day-to-day clinical workflows.

- Implemented an automated medicine inventory tracking system with low-stock alerts, reducing manual inventory monitoring effort.
- Developed a prescription management system supporting digital signatures, and patient history/medical records tracking for longitudinal patient data access.
- Designed REST APIs in Spring Boot to connect the React frontend with backend services, working independently end-to-end from requirements through delivery.

Web Developer Intern

LogiBit Technologies, Sangli | Jan 2024 – Jun 2024

- Contributed to backend feature development using Java and SQL, supporting core application modules.
- Optimized SQL queries and database schema, achieving a 40% improvement in query execution performance.
- Assisted in debugging and resolving production issues, improving application stability for end users.
- Participated in code reviews and Agile stand-ups, gaining hands-on exposure to professional SDLC practices.
- Built foundational REST API endpoints and assisted with integration testing.

KEY PROJECTS

Digital Banking Platform — Banking & Payment Processing Domain

Client: Exelon Fintech | Java, Spring Boot, Microservices, MySQL, Redis, Kafka, Docker, AWS, JWT/OAuth2, React.js

- Developed enterprise banking microservices for customer onboarding, account management, fund transfers, and payment processing, using Java and Spring Boot to process 10,000+ secure banking transactions daily.
- Implemented JWT/OAuth2 security and role-based access controls ensuring PCI-DSS-compliant authentication workflows.
- Optimized Redis caching and database queries, reducing transaction processing latency by 35%.
- Integrated Kafka-based event-driven processing for secure asynchronous payment handling.
- Developed responsive React.js UI components with REST API integration, improving user experience.

Stripe Payment Integration — E-Commerce / Fintech Domain

Client: Constellation UK | Java, Spring Boot, Microservices, Kafka, MySQL, Redis, Docker, Kubernetes, AWS

- Built enterprise payment microservices handling 1,000+ daily transactions at 99.9% success rate with full Stripe integration, including webhooks, subscription management, and automated reconciliation.
- Implemented JWT-based authentication and Spring Security role-based authorization, with OAuth2 security for customer data protection.
- Participated in CI/CD deployment pipelines and cloud-based deployments on AWS EC2 for production-ready delivery.

GymCal — AI-Powered Fitness & Nutrition Tracking App

Independent Project | Java, Spring Boot, JavaScript, MongoDB Atlas, Groq API, Spring Security (JWT)

- Independently designed, built, and deployed a full-stack AI fitness and nutrition tracking app with Spring Boot backend (Render) and JavaScript frontend (Vercel).
- Built AI-powered food logging with automatic unit conversion and calorie classification using Groq API (Llama models), plus a personalized 7-day AI workout plan generator.
- Designed an animated water intake tracker and implemented Spring Security JWT authentication across the application.

EDUCATION

Master of Computer Applications (MCA), Computer Science

Bharati Vidyapeeth University, Pune | CGPA: 9.00/10 | 2025

Bachelor of Computer Applications (BCA), Computer Science

Bharati Vidyapeeth University, Pune | CGPA: 8.38/10

CERTIFICATIONS & ACHIEVEMENTS

- Postman API Fundamentals Certification — Postman | Full Stack Java Certification — Infosys Springboard / HackerRank / Simplilearn

- AWS Certification — AWS
- Solved 500+ Data Structures & Algorithms problems on LeetCode and GeeksforGeeks
- Strong understanding of Distributed Systems, Microservices Architecture, and System Design
- Guest Lecturer — Delivered technical sessions on Core Java and software development practices at multiple engineering colleges

LANGUAGES

English, Hindi, Marathi
